Assessing Hydrocarbon Potential in the Mundaú Sub-Basin: *Cretaceous Turbidites in Deepwater Settings*

Victor Virgilio Piccoli Miranda de Freitas

Geophysicist Interpreter at the Superintendence of Geological and Economic Assessment (SAG) - ANP

October 17, 2023

NOTICE

The ANP's institutional presentation is based on current and reliable information, but no representation or warranty is made as to its accurateness and completeness, and it should not be relied upon as such.

Projections and estimated values are included without any guarantee as to their future realization.

Forward-looking data, information, projections and opinions expressed during the presentation are subject to change without prior notice.

18th International Congress
of the Brazilian Geophysical
Society & Expogef
RIO DE JANEIRO 16-19 OCTOBER 2023

Agenda

- INTRODUCTION
- TECTONO-STRATIGRAPHIC EVOLUTION
- SEISMIC INTERPRETATION – MAIN PLAY & PETROLEUM SYSTEM EVALUATION
- FINAL REMARKS

18th International Congress
of the Brazilian Geophysical
Society & Expogef
RIO DE JANEIRO 16-19 OCTOBER 2023

Agenda

- INTRODUCTION
- TECTONO-STRATIGRAPHIC EVOLUTION
- SEISMIC INTERPRETATION – MAIN PLAY & PETROLEUM SYSTEM EVALUATION
- FINAL REMARKS

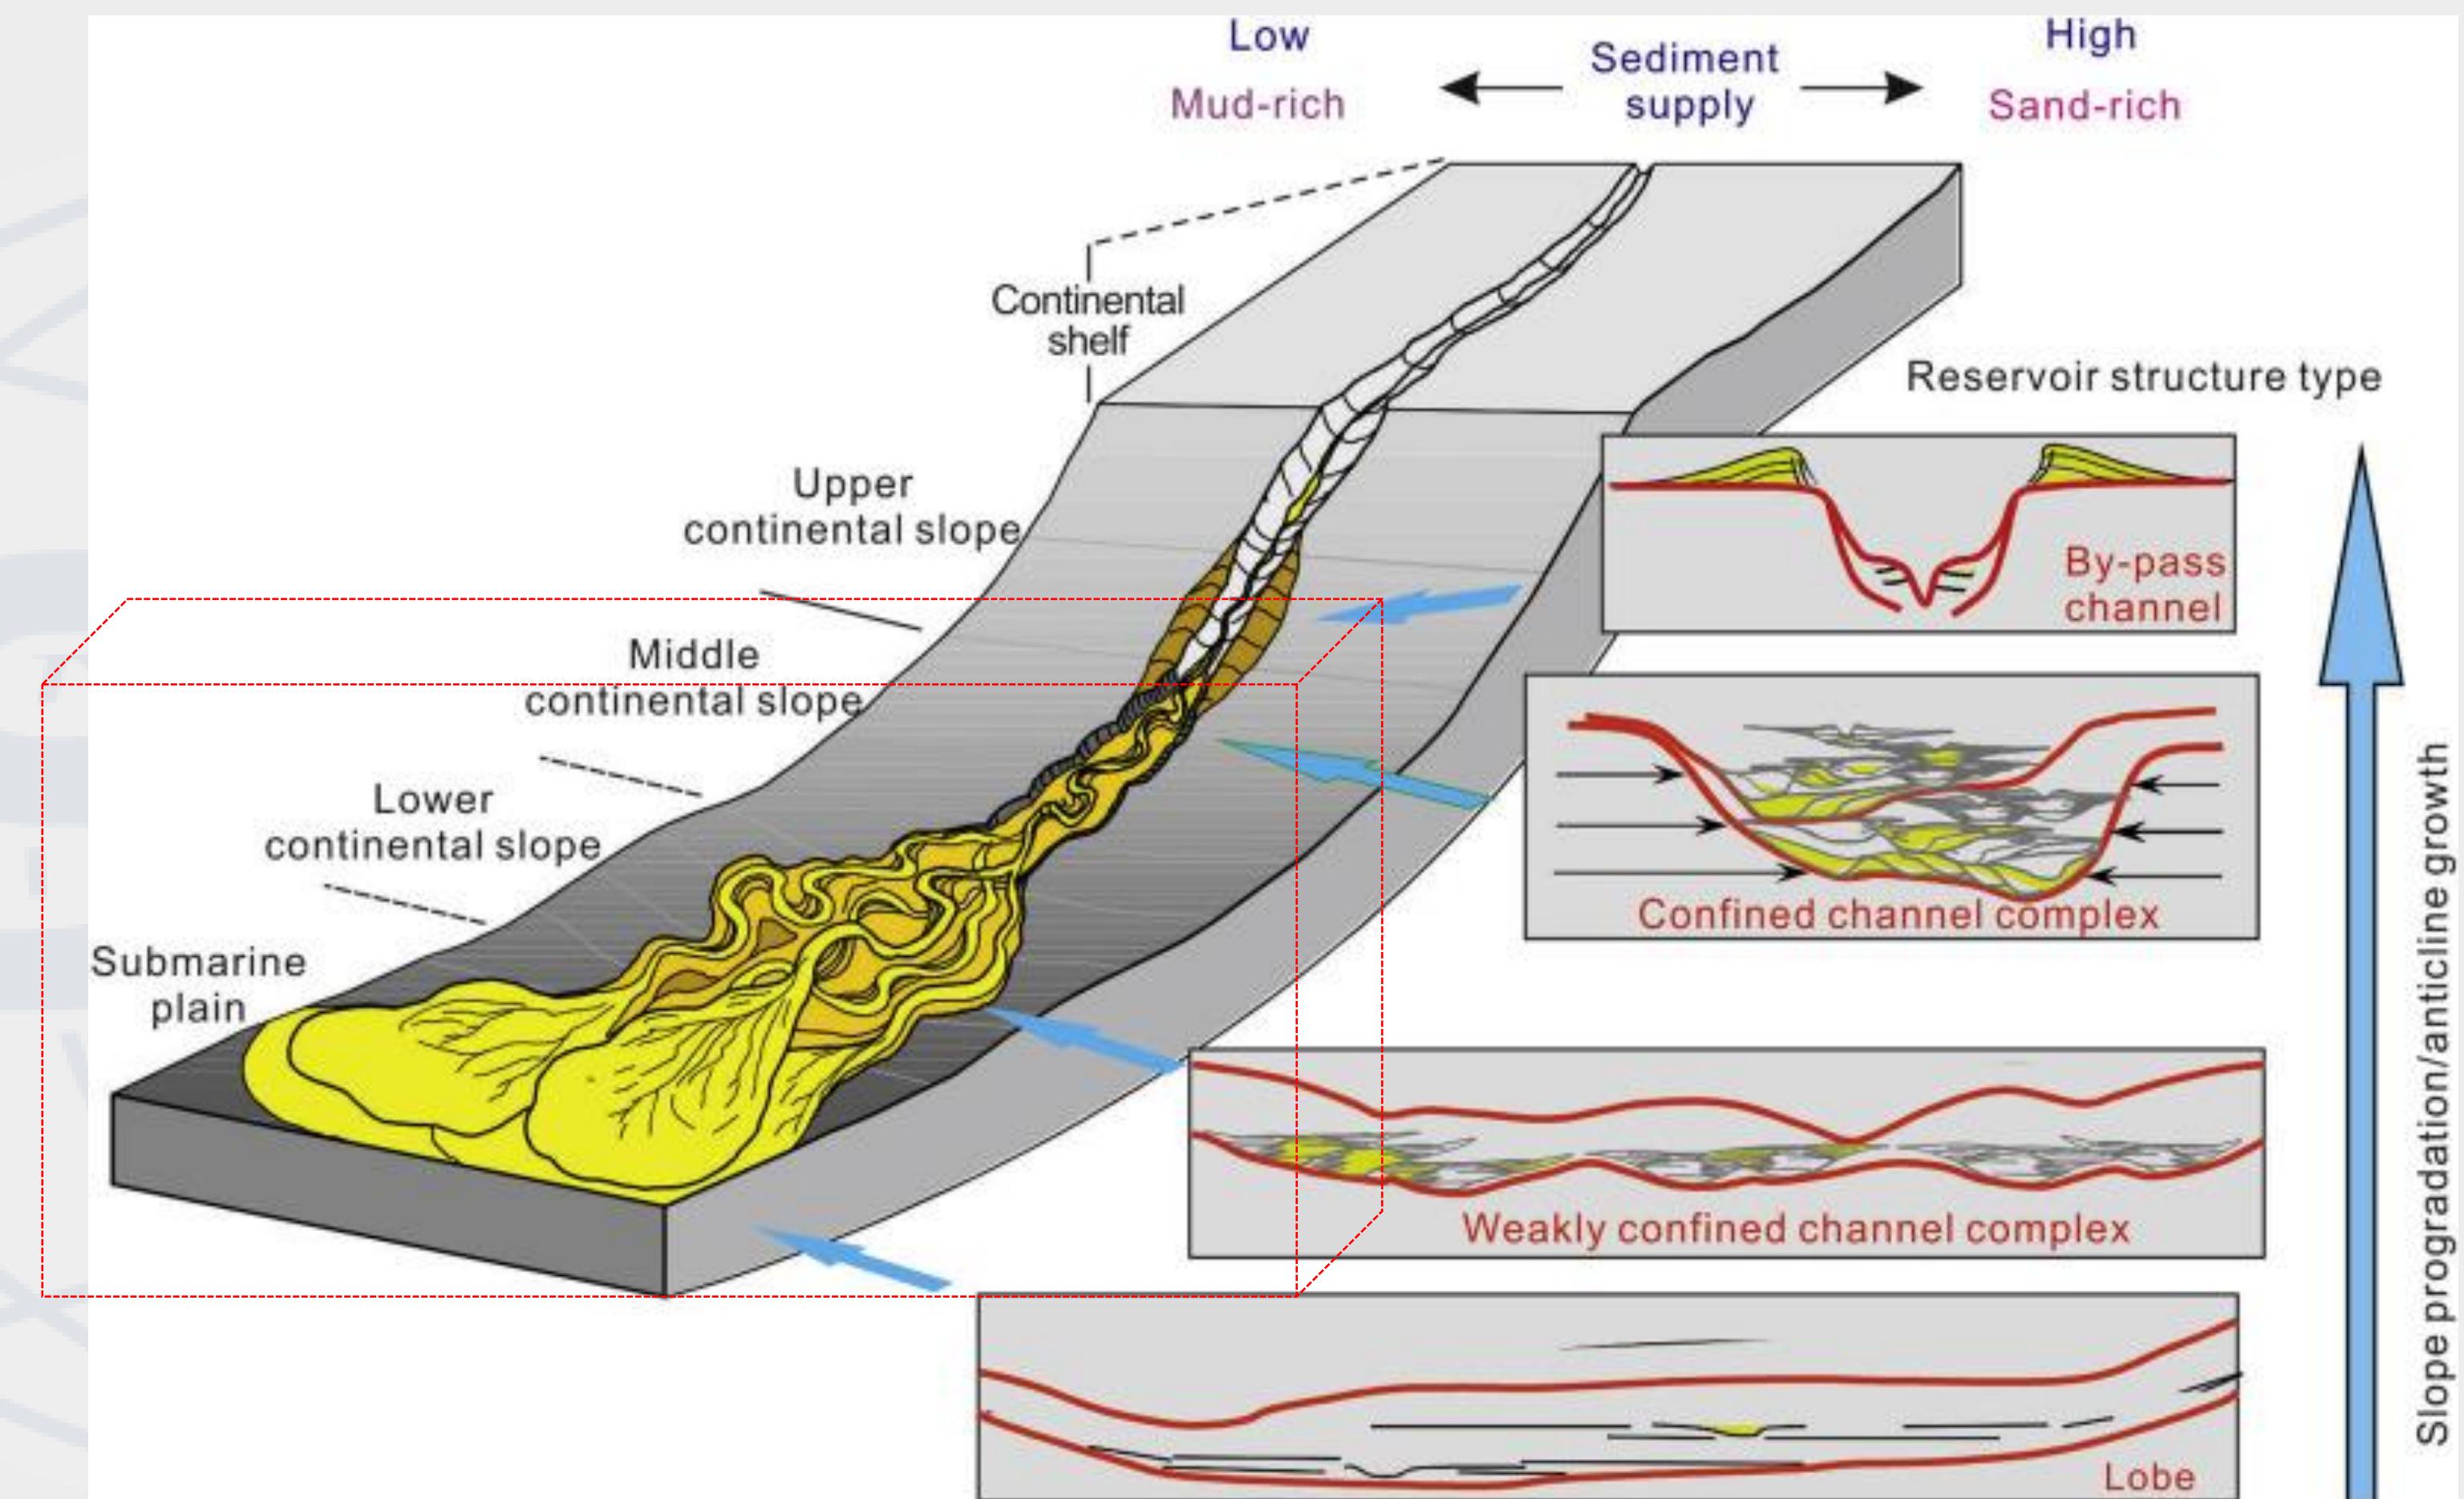

Model of the Reservoir: Turbidites in DeepWaters

Sedimentary Model of Turbidite Fan:

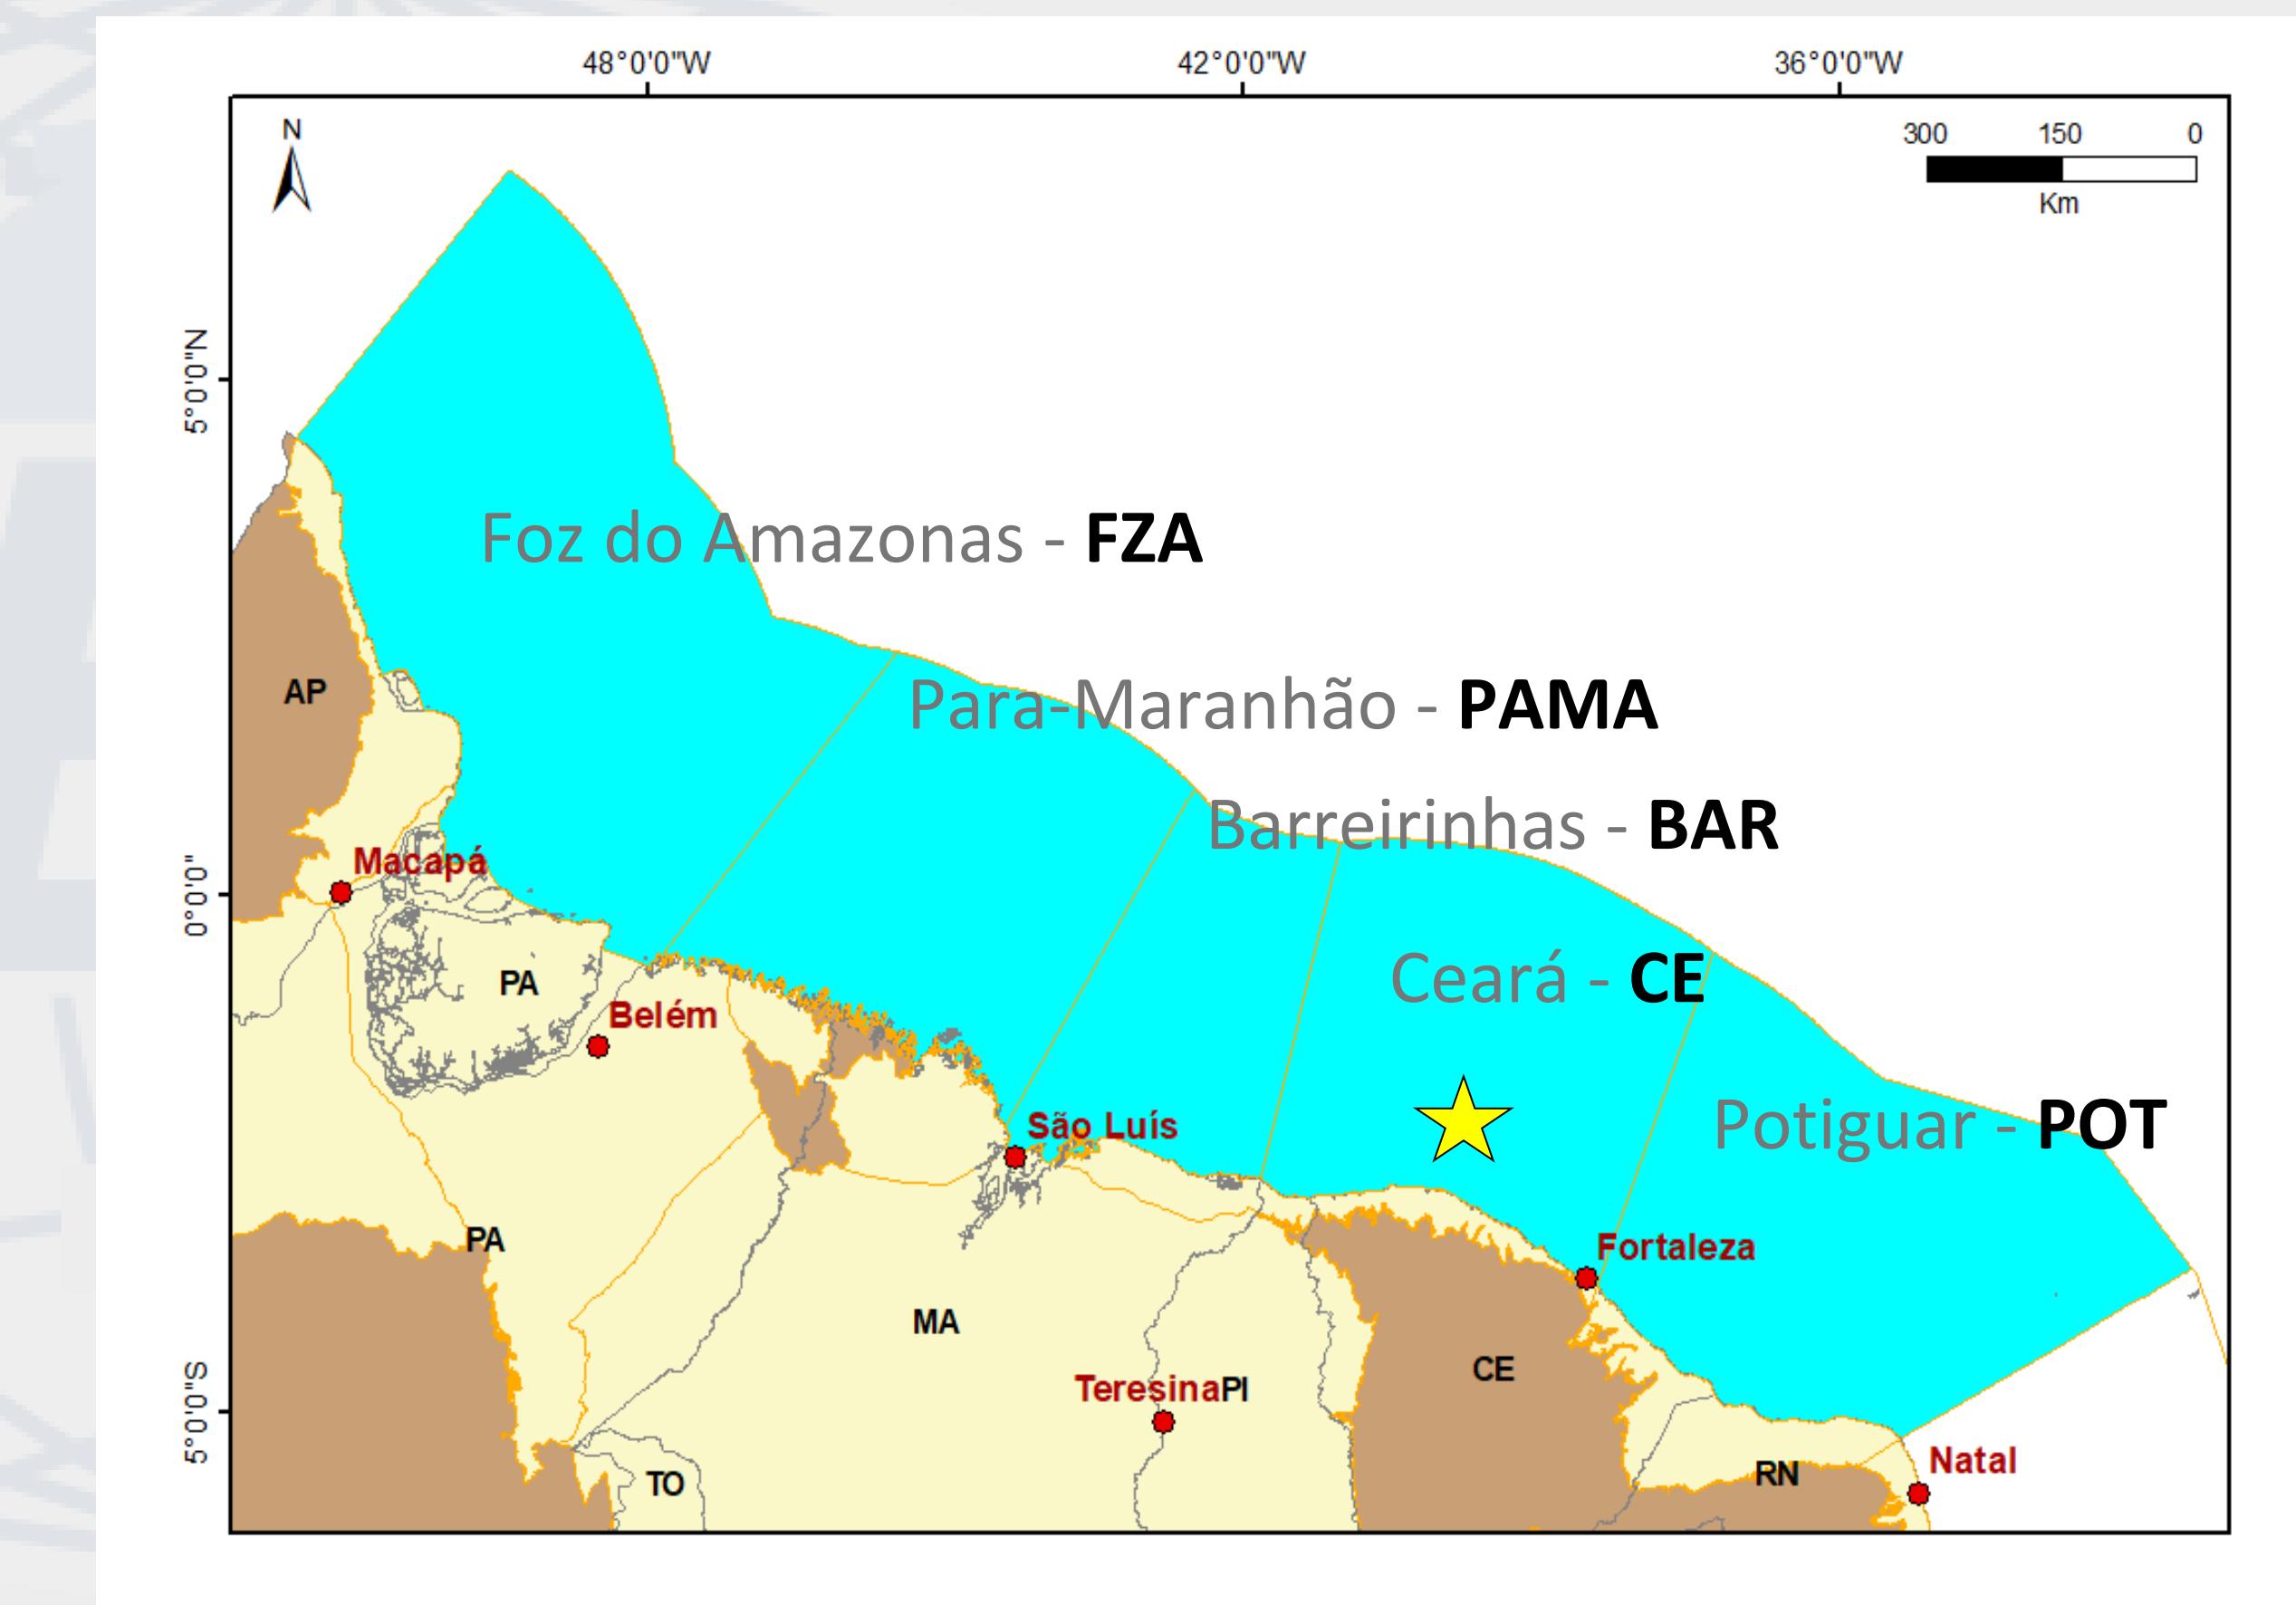

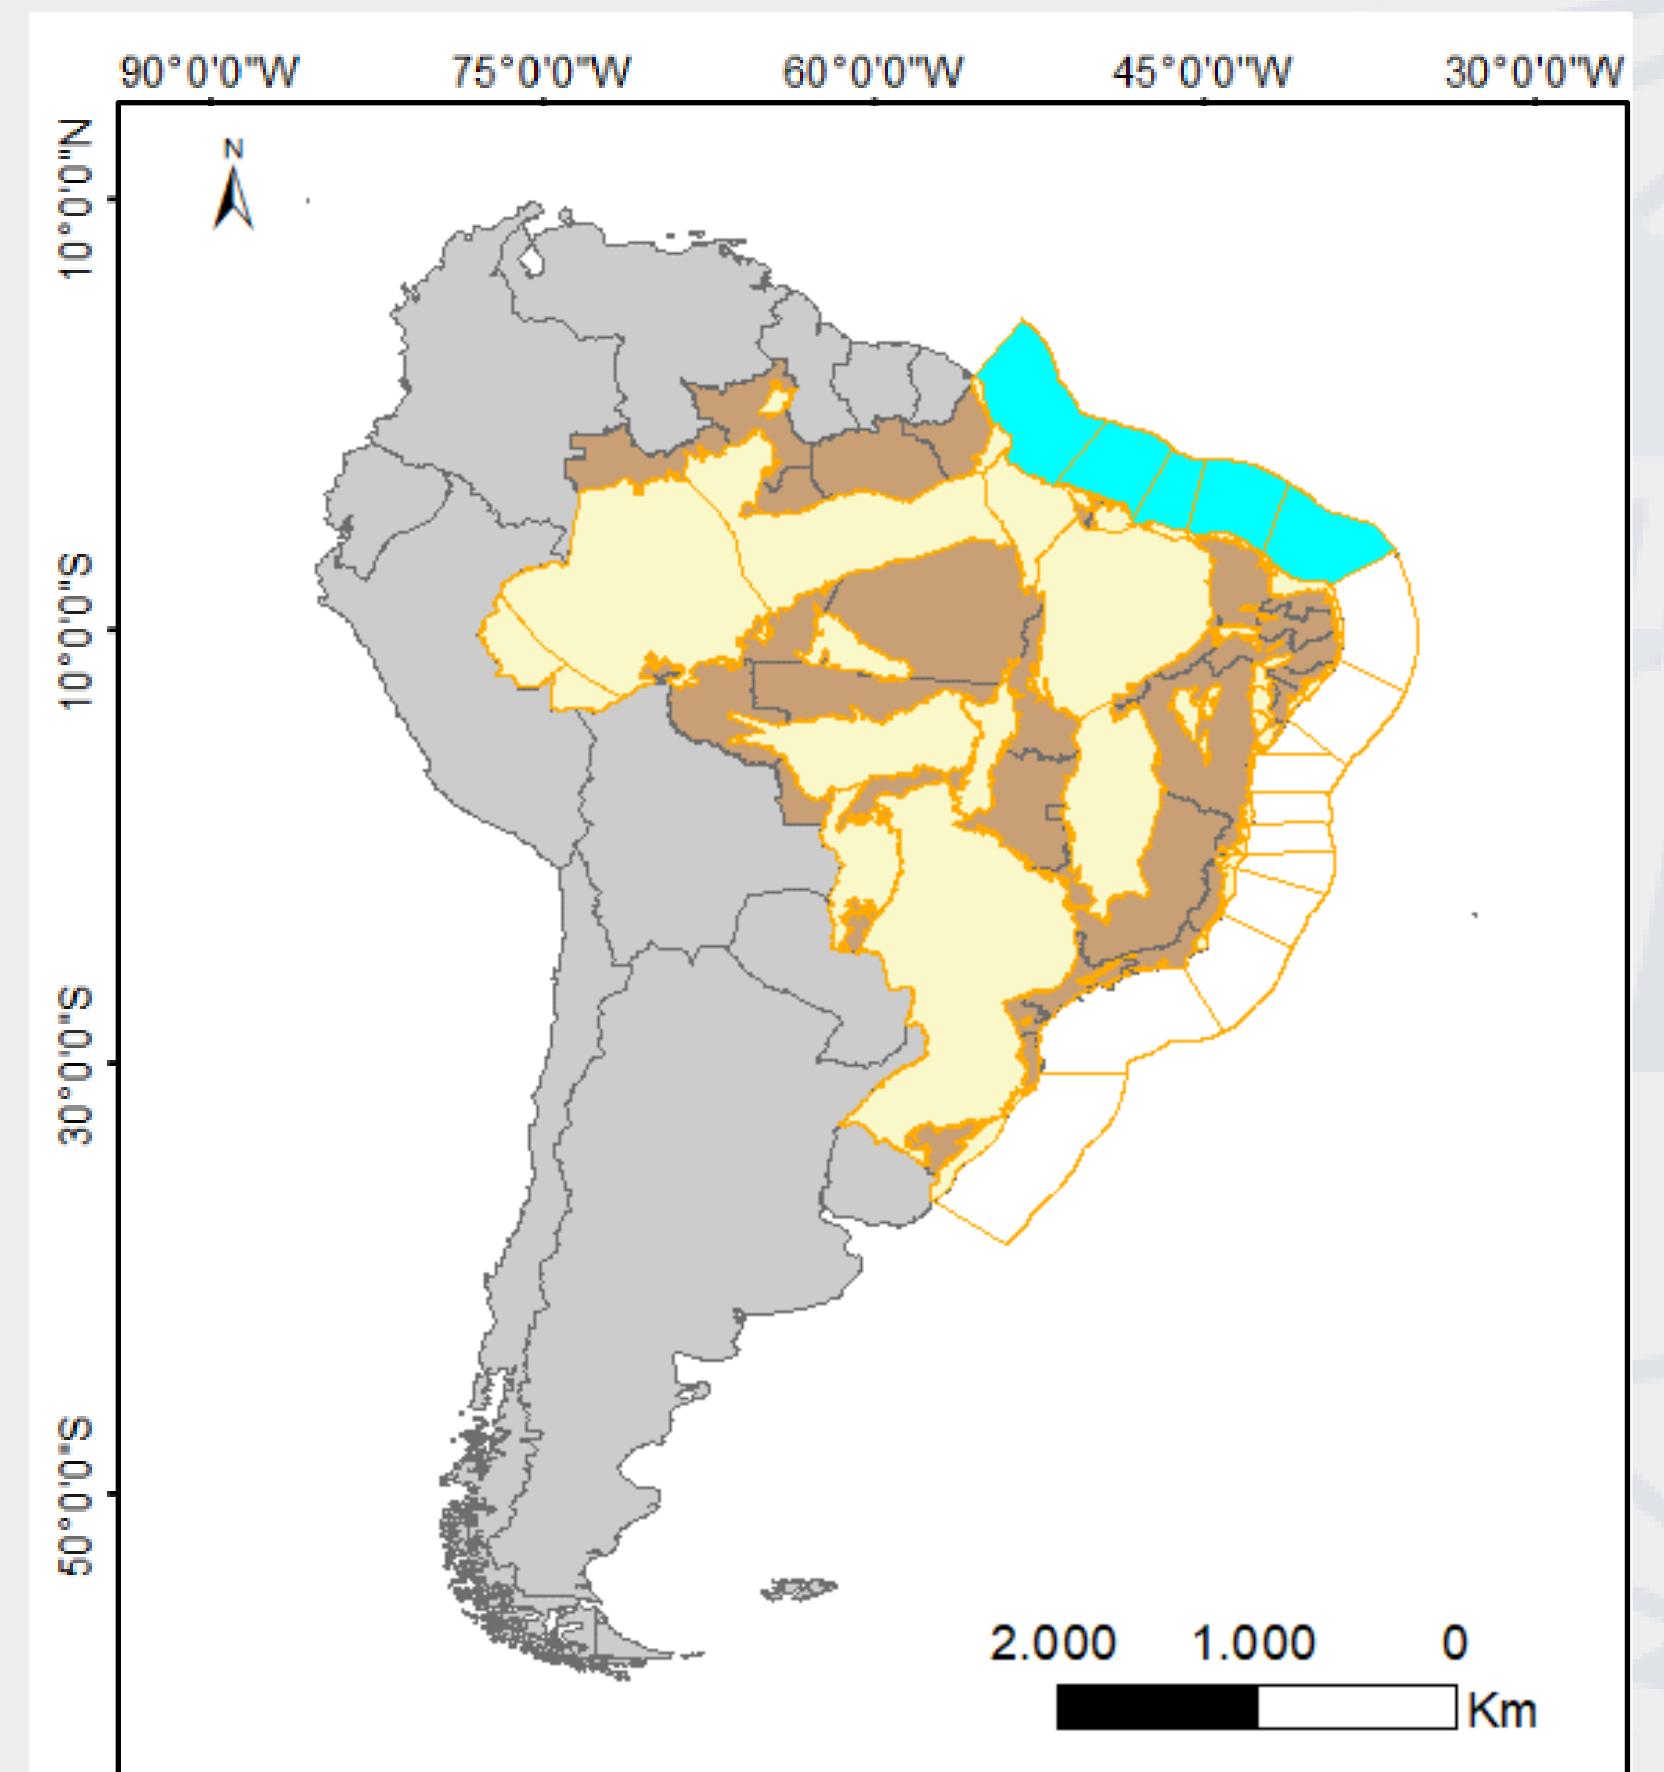

Huang (2018). showing that the incised valleys and bypass channels are developed in the continental slope and the upper slope; the confined channel complexes and weakly confined channel complexes are developed in the middle slope and the lower slope; and the lobes are developed in the submarine plain (according to ENI with slightly modification).

Stratigraphy of Upper Cretaceous Environment in DeepWaters

18th International Congress
of the Brazilian Geophysical
Society & Expogef
RIO DE JANEIRO 16-19 OCTOBER 2023

Agenda

- INTRODUCTION
- TECTONO-STRATIGRAPHIC EVOLUTION
- SEISMIC INTERPRETATION – MAIN PLAY & PETROLEUM SYSTEM EVALUATION
- FINAL REMARKS

- Reservoir: Negative Anomaly Amplitudes and the Spectral Decomposition Attribute enriched possible geometries and increased the possibility of Reservoir existence in the range of interest.
- Seal and Traps: The spectral decomposition showed possible geometries related to channels and lobes and their various sequences interspersed with possibly thinner materials. The Minimum Amplitude attribute also differentiated sandy geological structures from the sedimentary matrix.
- Source Rock: The possible source rock of Aptian age was identified below the reservoir interval through seismic interpretation .
- Final considerations: The seismic attributes enriched the interpretations regarding the reservoir and the type of trap. However, future studies still need to be done in the region to understand even more about the Deepwater Basin Petroleum System.
