Missão da Divisão de Proteção

Ser capaz de conduzir ações para **neutralizar ataques e exploração cibernética** contra os nossos dispositivos computacionais, redes de computadores e de comunicações, incrementando as ações de guerra cibernética em face de uma situação de crise ou conflito. É uma atividade de caráter **permanente**.

Quando a prevenção falha...

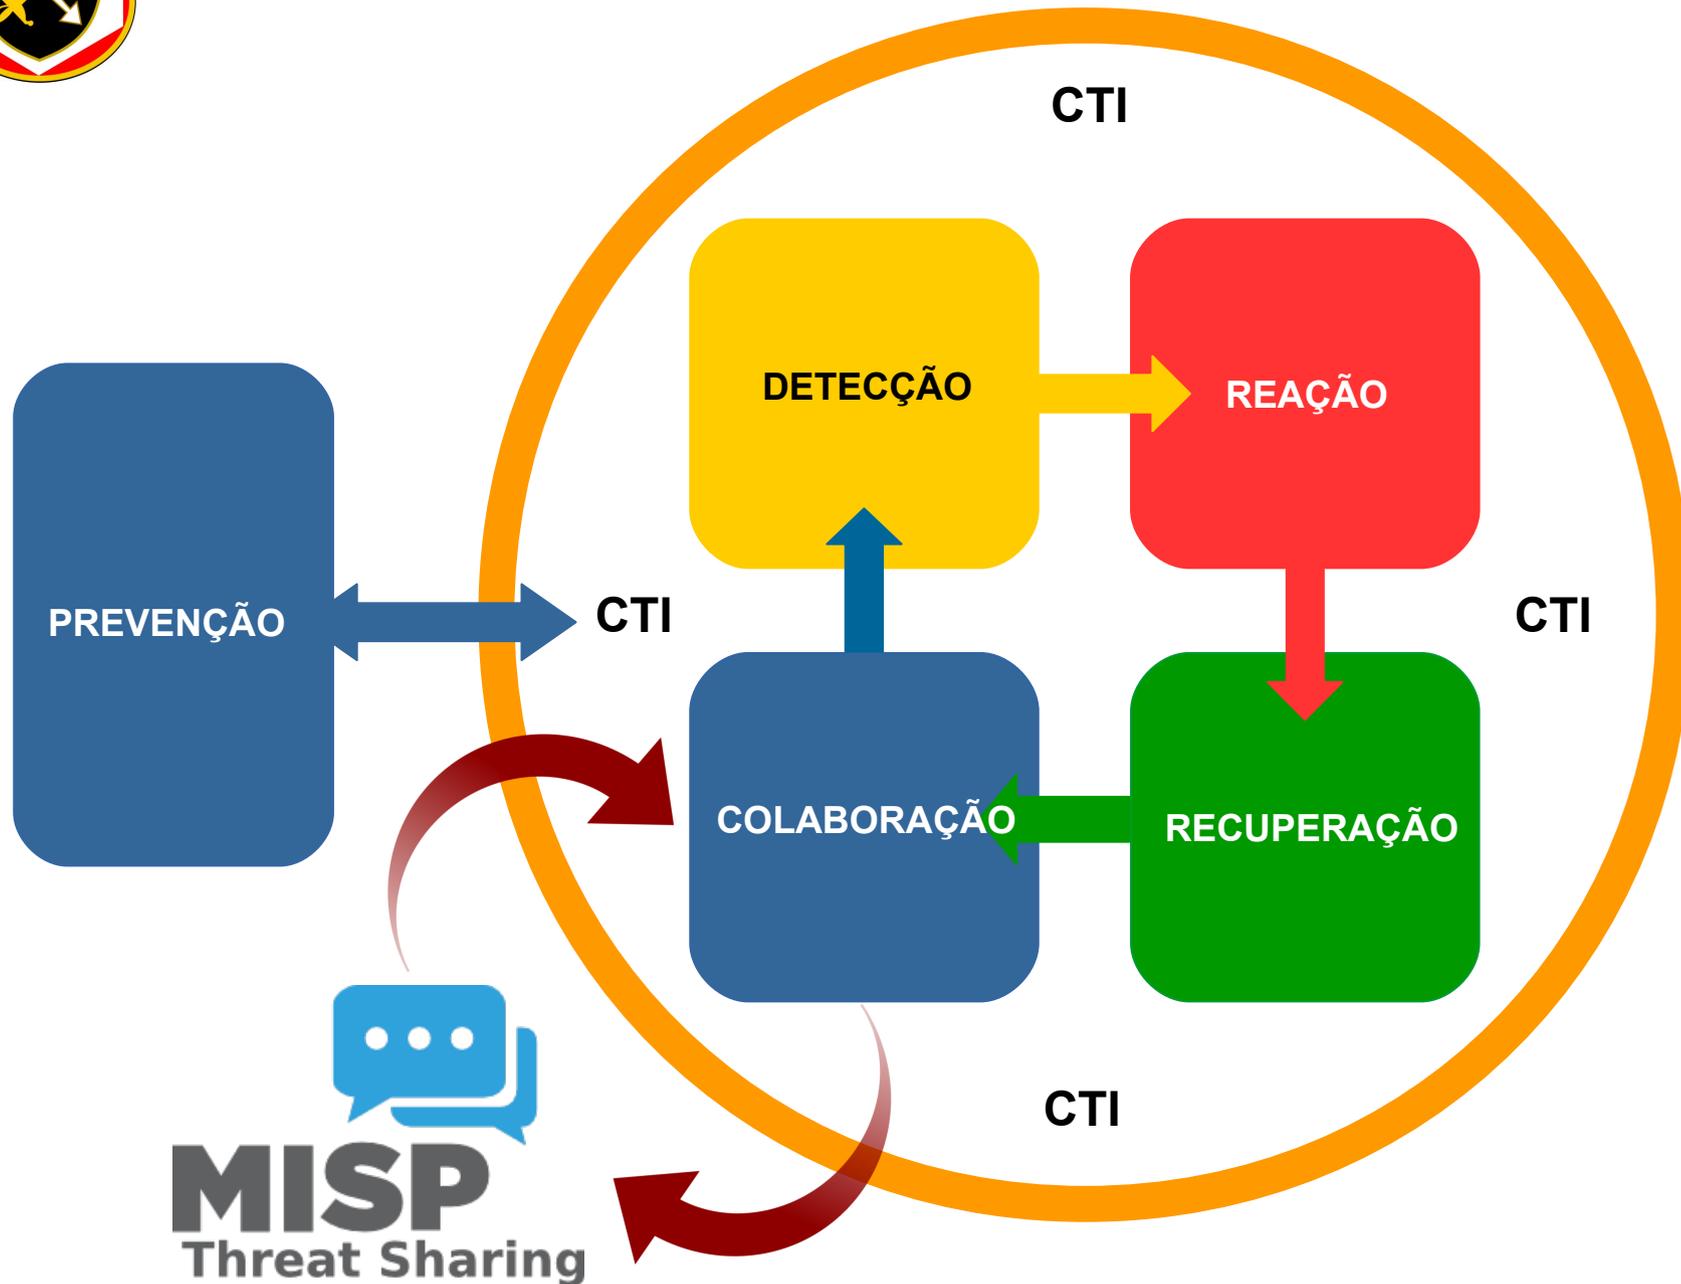

Quando a prevenção falha...

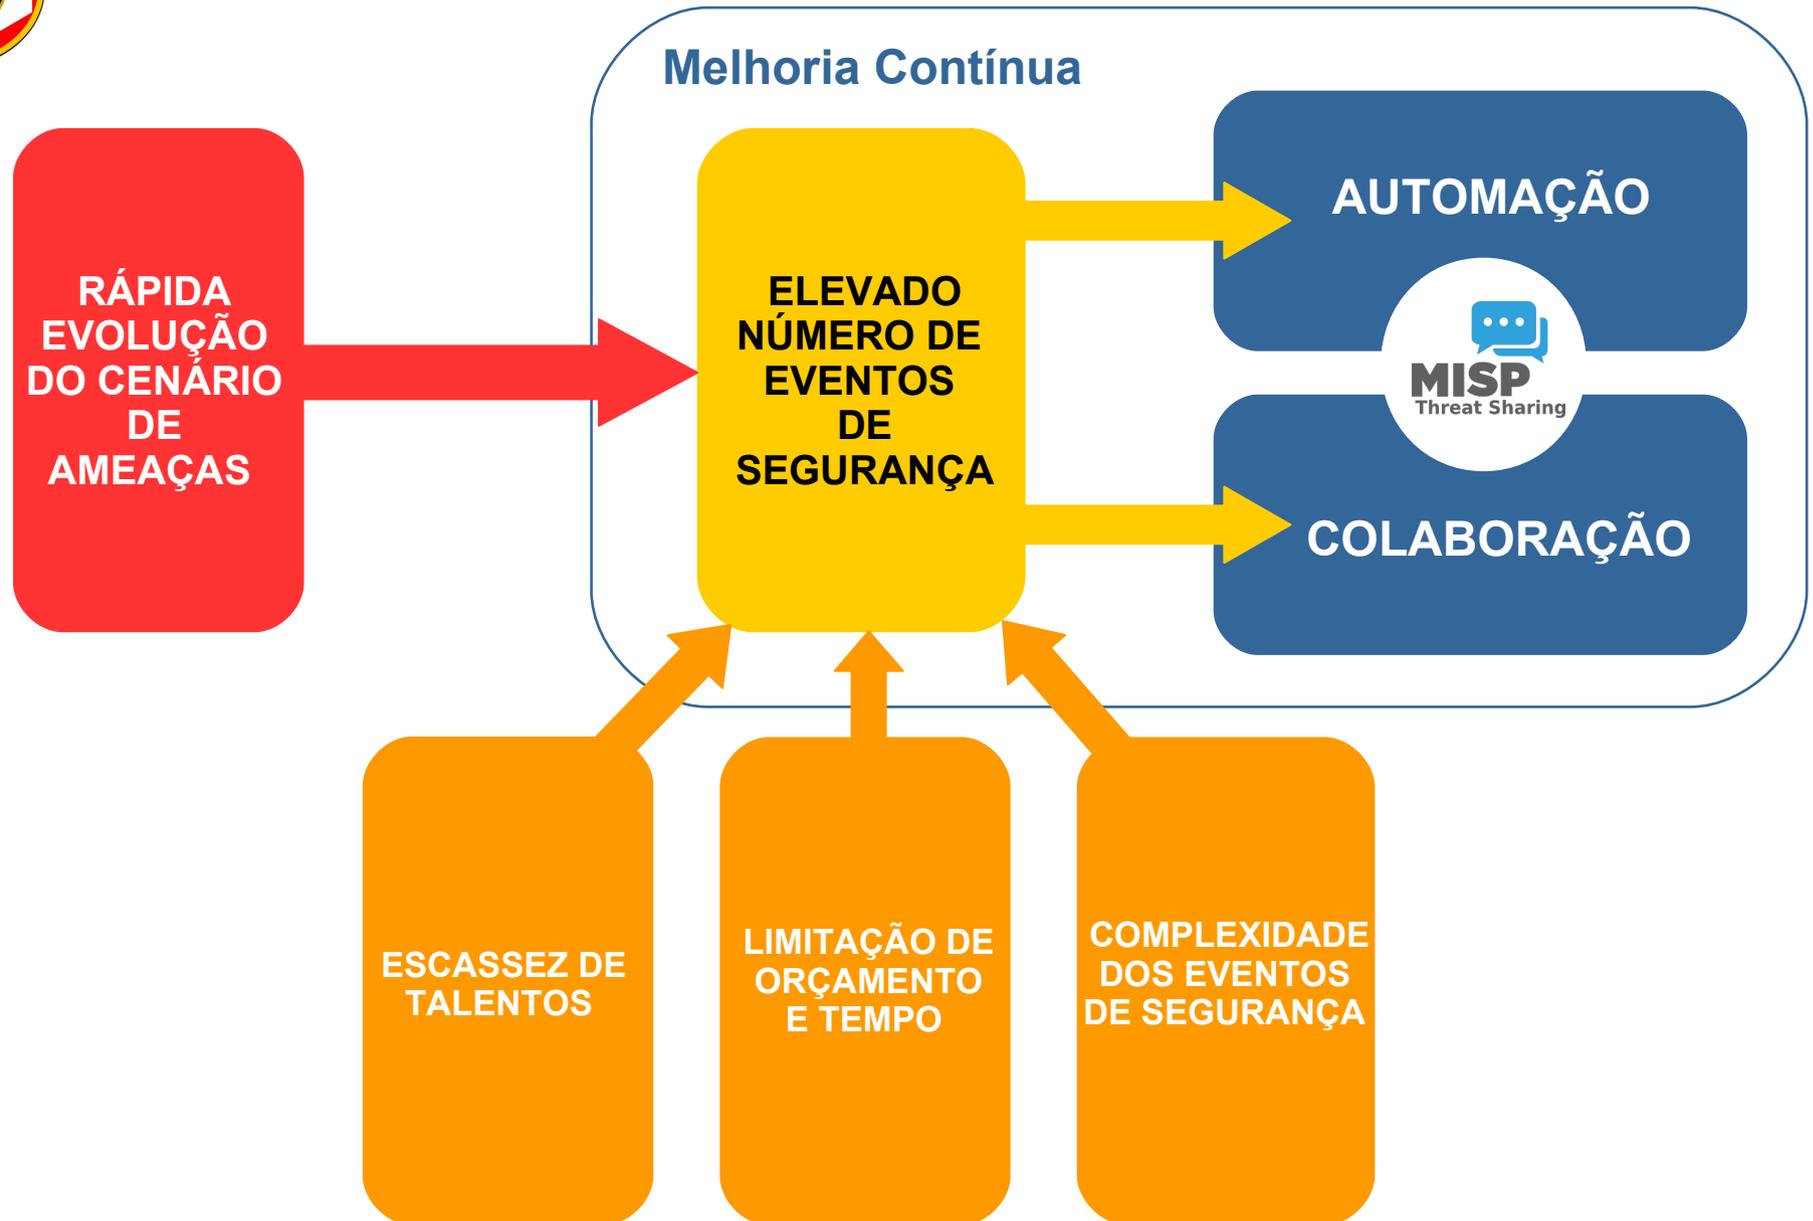

Quando a prevenção falha...

Para reduzir o tempo de reação!

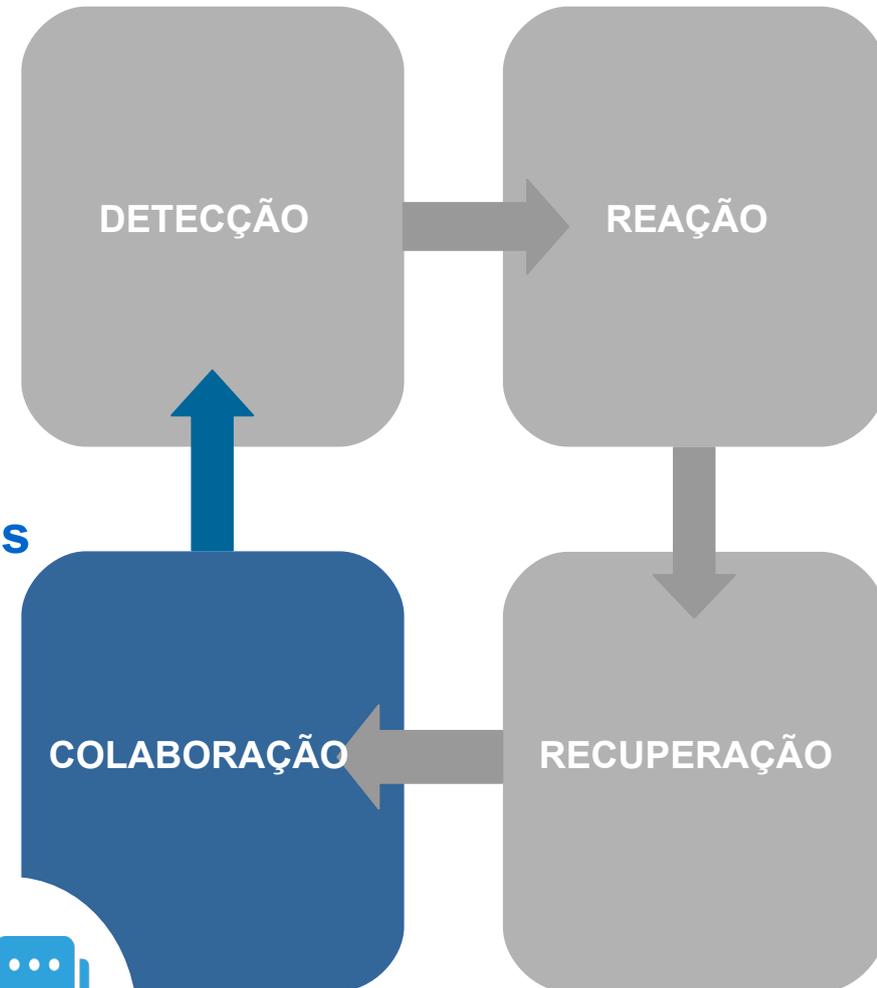

Fatos...

- ✓ Inteligência de Ameaças + Análise Forense Digital + Resposta a Incidentes = **Trabalho de Equipe**
- ✓ Nós devemos buscar o **impulsionamento** dessas atividades e **aprimorá-las** continuamente
- ✓ Graças à equipe de operações é possível a obtenção de **estatísticas** significativas

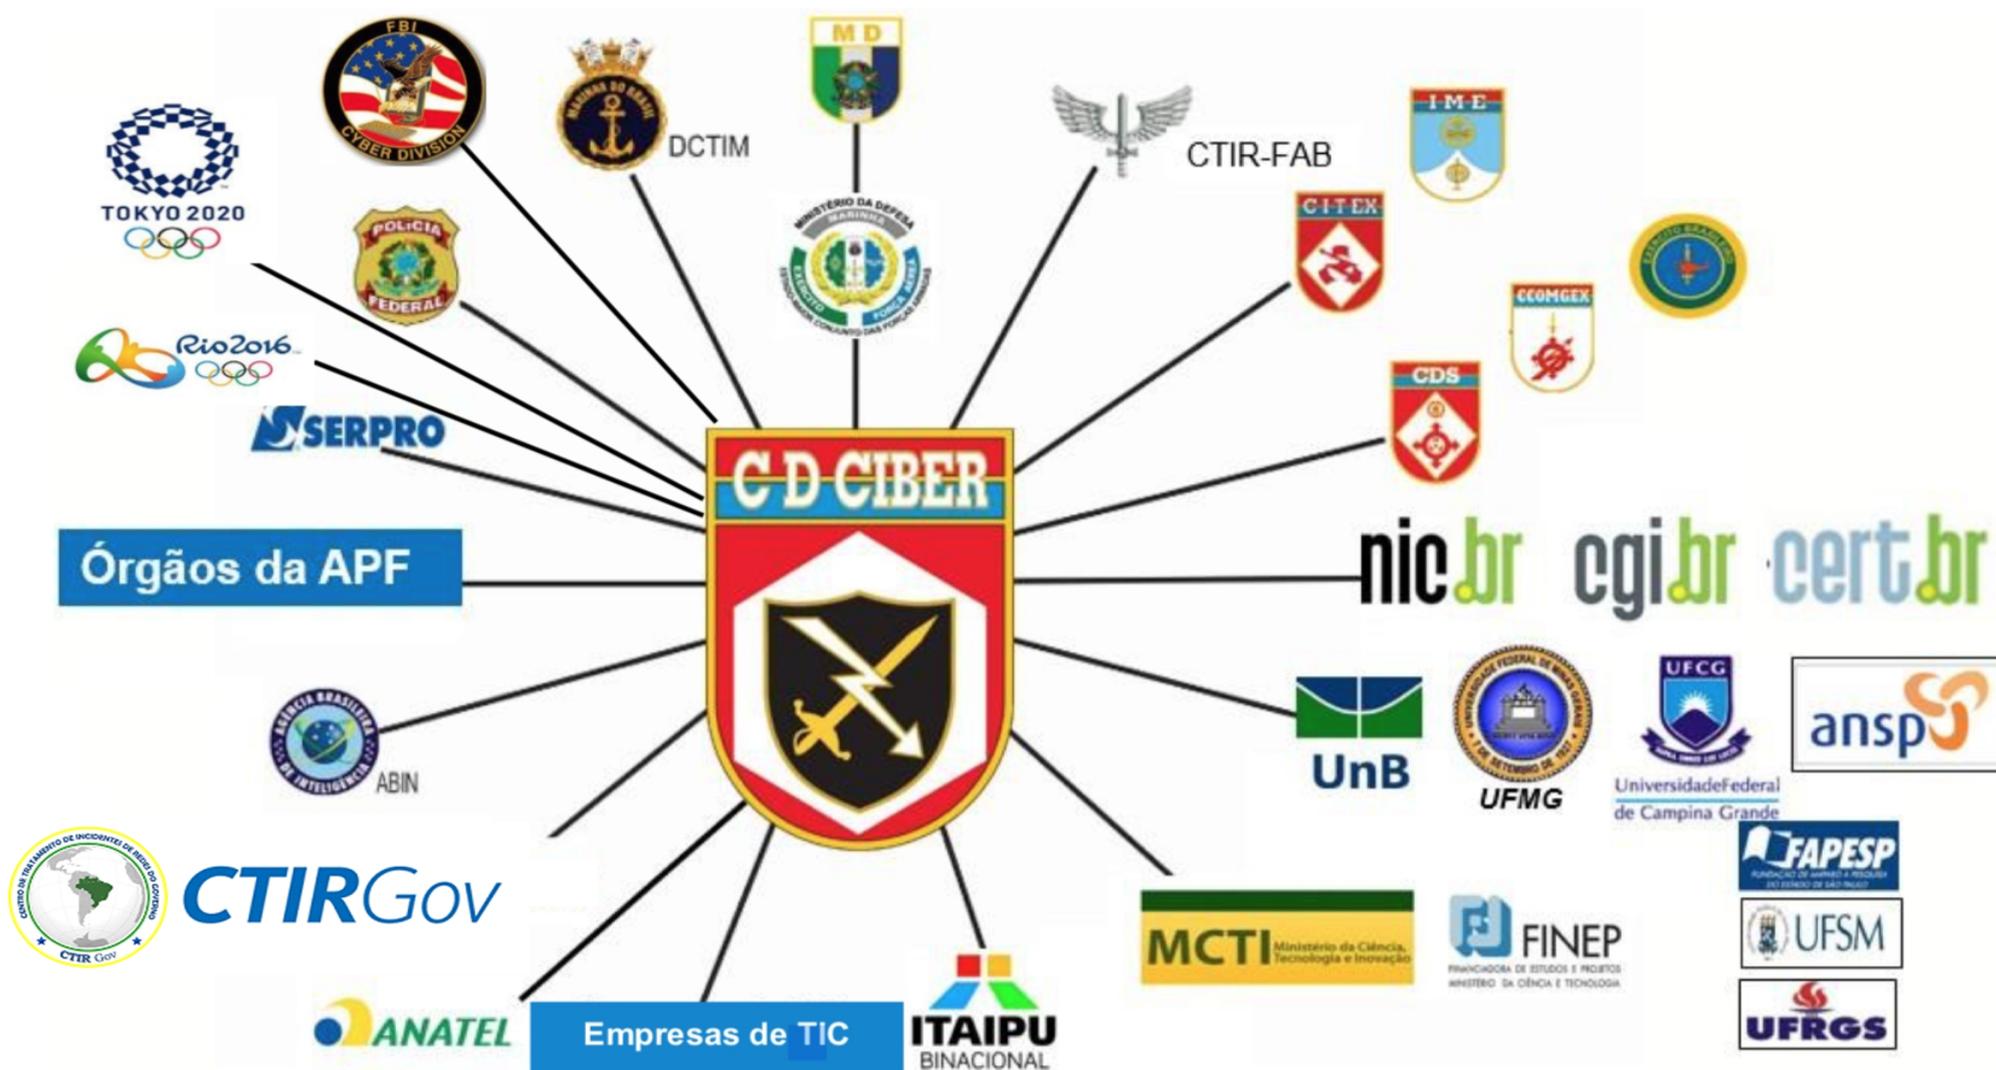

Compartilhar é se importar! Minha detecção é sua prevenção!

- ✓ Investigação realizada, **IOC's coletados** e resposta adequada feita.
- ✓ É hora de descansar? **Não!**
- ✓ Alguns, se não todos os IOC's, devem ser **compartilhados**.
- ✓ Eles podem ser **úteis para outras instituições se defenderem**.
- ✓ Espera-se que outras instituições criem **IOC's complementares** que eram desconhecidos para nós.

Rede de Colaboração Cibernética

Malware Information Sharing Platform and Threat Sharing

- ✓ Início do uso da plataforma em 2012
- ✓ Cristophe Vandeplass – CERT Belga
- ✓ [_https://github.com/MISP/MISP](https://github.com/MISP/MISP)
- ✓ [_http://www.misp-project.org](http://www.misp-project.org)

CIRCL
MISP
Threat Sharing

O que é

- ✓ O Malware Information Sharing Platform and Threat Sharing (MISP) é uma solução de software de código aberto para coletar, armazenar, distribuir e compartilhar **indicadores de segurança e ameaças cibernéticas**.
- ✓ O MISP foi projetado por e para **analistas de incidentes, especialistas em engenharia reversa de malware e profissionais de segurança** para dar suporte às suas operações do dia-a-dia e compartilhar informações estruturadas de maneira eficiente.

Principais funcionalidades do

- ✓ Compartilhamento de informações estruturadas ou não dentro da comunidade de segurança (**IOC e threat sharing**).
- ✓ Correlacionamento automático, importação de texto livre, distribuição e colaboração de eventos.
- ✓ Suporte a vários formatos para exportação: IDS/IPS (Suricata, Snort), SIEM, Host Scanners (OpenIOC, STIX, CSV, Yara), plataformas de análise (Maltego), dentre outras.
- ✓ Compartilhamento de indicadores para otimizar a **detecção e bloqueio de ameaças** como também obter a **inteligência da ameaça**.

Quais os benefícios do

- ✓ **Eliminar a duplicação** de trabalho analítico.
- ✓ Detectar de forma mais eficiente as ameaças.
- ✓ Melhorar a inteligência e a atribuição de ameaças. (**visão holística versus de uma única organização**)
- ✓ Permitir a interoperabilidade. (**Padronização dos protocolos** de compartilhamento)
- ✓ Dar suporte à automação por intermédio de recursos de **importação e exportação de IOC's**.

Overview do Projeto MISP

Galaxy

warning-lists

Taxonomies

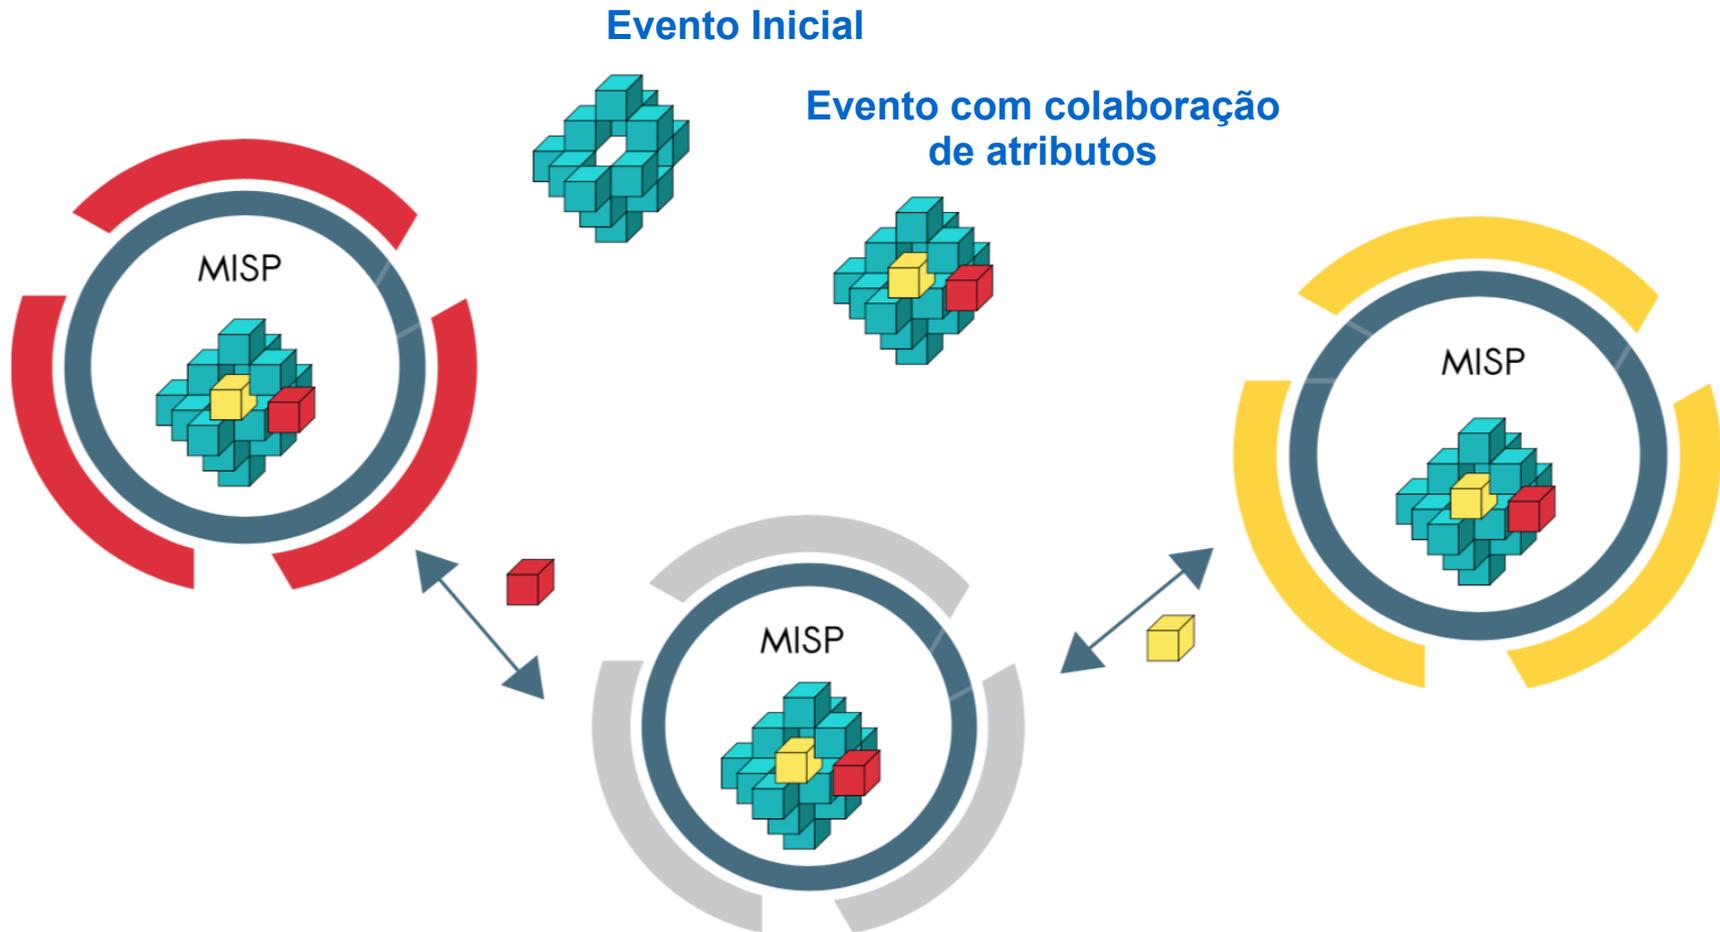

modules (import, export, enrichment)

- ✓ Projeto desenvolvido em PHP e Python
- ✓ Módulos (Python) para expandir as funcionalidades (importação e exportação)
- ✓ Taxonomias (JSON) para adicionar categorias e marcação global
- ✓ Listas de avisos (JSON) para detectar possíveis falsos positivos
- ✓ Galaxy (JSON) para adicionar agentes de ameaças, ferramentas ou "inteligência"

MISP 2.4.93 released (aka ATT&CK integration)

The screenshot shows the MITRE ATT&CK website interface. At the top, there's a browser window with the URL https://attack.mitre.org/wiki/Main_Page. Below the browser, the MITRE logo and 'Log in' link are visible. The main navigation includes 'Main page', 'Discussion', 'Read', 'View source', and 'View history'. A search bar is present with the text 'Search enterprise'. The page title is 'Adversarial Tactics, Techniques & Common Knowledge'. A 'Welcome to ATT&CK' section follows, containing a description of the knowledge base and a note about the MITRE Partnership Network (MPN) account requirement. Below this is a red banner for 'API Migration (May 2018)'. The main content area is divided into three columns: 'ATT&CK for Enterprise', 'Enterprise Platform Coverage', and 'News and Updates'. The sidebar on the left lists various categories like 'Tactics', 'Techniques', 'Groups', 'Software', and 'Tools'.

Adversarial Tactics, Techniques & Common Knowledge

Welcome to ATT&CK

MITRE's Adversarial Tactics, Techniques, and Common Knowledge (ATT&CK™) is a curated knowledge base and model for cyber adversary behavior, reflecting the various phases of an adversary's lifecycle and the platforms they are known to target. ATT&CK is useful for understanding security risk against known adversary behavior, for planning security improvements, and verifying defenses work as expected.

Note: A MITRE Partnership Network (MPN) account is not required to view and use the ATT&CK site.

[PRE-ATT&CK](#) | [ATT&CK for Enterprise](#) | [ATT&CK Mobile Profile](#)

API Migration (May 2018)

We are in the process of migrating to new infrastructure in the coming months. A new website will be stood up to display ATT&CK content and the MediaWiki API is being transitioned to a STIX/TAXII 2.0 API. Please see [here](#) for details. If you are using the MediaWiki API, please begin migrating and reach out to attack@mitre.org with questions. The MediaWiki site will be deprecated (will not be receiving content updates) when the new website is released in July 2018. At this time the Wiki will be moved and API will still be available but will eventually be taken offline at a date that is TBD, but will not be sooner than September 2018.

MISP 2.4.93 released (aka ATT&CK integration)

ATT&CK Matrix for Enterprise

The full ATT&CK Matrix below includes techniques spanning Windows, Mac, and Linux platforms and can be used to navigate through the knowledge base.

Initial Access	Execution	Persistence	Privilege Escalation	Defense Evasion	Credential Access	Discovery	Lateral Movement	Collection	Exfiltration	Command and Control
Drive-by Compromise	AppleScript	.bash_profile and .bashrc	Access Token Manipulation	Access Token Manipulation	Account Manipulation	Account Discovery	AppleScript	Audio Capture	Automated Exfiltration	Commonly Used Port
Exploit Public-Facing Application	CMSTP	Accessibility Features	Accessibility Features	BITS Jobs	Bash History	Application Window Discovery	Application Deployment Software	Automated Collection	Data Compressed	Communication Through Removable Media
Hardware Additions	Command-Line Interface	AppCert DLLs	AppCert DLLs	Binary Padding	Brute Force	Browser Bookmark Discovery	Distributed Component Object Model	Clipboard Data	Data Encrypted	Connection Proxy
Replication Through Removable Media	Control Panel Items	Applnit DLLs	Applnit DLLs	Bypass User Account Control	Credential Dumping	File and Directory Discovery	Exploitation of Remote Services	Data Staged	Data Transfer Size Limits	Custom Command and Control Protocol
Spearphishing Attachment	Dynamic Data Exchange	Application Shimming	Application Shimming	CMSTP	Credentials in Files	Network Service Scanning	Logon Scripts	Data from Information Repositories	Exfiltration Over Alternative Protocol	Custom Cryptographic Protocol
Spearphishing Link	Execution through API	Authentication Package	Bypass User Account Control	Clear Command History	Credentials in Registry	Network Share Discovery	Pass the Hash	Data from Local System	Exfiltration Over Command and Control Channel	Data Encoding
Spearphishing via Service	Execution through Module Load	BITS Jobs	DLL Search Order Hijacking	Code Signing	Exploitation for Credential Access	Password Policy Discovery	Pass the Ticket	Data from Network Shared Drive	Exfiltration Over Other Network Medium	Data Obfuscation
Supply Chain Compromise	Exploitation for Client Execution	Bootkit	Dylib Hijacking	Component Firmware	Forced Authentication	Peripheral Device Discovery	Remote Desktop Protocol	Data from Removable Media	Exfiltration Over Physical Medium	Domain Fronting
Trusted Relationship	Graphical User Interface	Browser Extensions	Exploitation for Privilege Escalation	Component Object Model Hijacking	Hooking	Permission Groups Discovery	Remote File Copy	Email Collection	Scheduled Transfer	Fallback Channels
Valid Accounts	InstallUtil	Change Default File Association	Extra Window Memory Injection	Control Panel Items	Input Capture	Process Discovery	Remote Services	Input Capture		Multi-Stage Channels

Plano de Trabalho para Implantação

Reuniões de Especialistas

- Objetivo: trocas de **lições aprendidas** sobre a implantação, operação, suporte, segurança e infraestrutura.
- Foi criado um **Grupo de WhatsApp** com especialistas de vários setores de infraestrutura estratégica (órgãos de governo da APF, financeiro, telecomunicações e energia).
- A 1ª reunião foi realizada em **12 JUL 18** no **CTIR Gov** com a presença do militares do CDCiber, CTIR Gov e BRB.
- Próxima reunião agendada para **300930 AGO 2018**.

Conclusão

O segredo do compartilhamento de informações **é compartilhar mais (e melhor)** do que seus adversários!

Conclusão

- O MISP **é apenas uma ferramenta**. O que importa são as suas práticas de compartilhamento.
- Transparência nos processos de colaboração entre diversas equipes de segurança que podem **interconectar e sincronizar** as informações entre elas.
