1. INTRODUÇÃO

1.1 - Alerta Tecnológico

O Instituto Nacional da Propriedade Industrial (INPI) é uma Autarquia Federal, vinculada ao Ministério do Desenvolvimento, Indústria e Comércio Exterior (MDIC), responsável pela concessão de patentes, registros de desenhos industriais, registro de marcas, averbação de contratos de transferência de tecnologia, registro de programas de computador, indicações geográficas e topografias de circuito integrado.

O Centro de Disseminação da Informação Tecnológica (CEDIN), subordinado à Diretoria de Cooperação para o Desenvolvimento (DICOD), mantém um acervo com a descrição dos pedidos de patente e de registros de desenhos industriais. Uma de suas atribuições é divulgar e disseminar a utilização destas informações bibliográficas e técnicas. Para tanto, o CEDIN dispõe da Coordenação de Estudos e Programas – CEPRO, cuja incumbência é elaborar publicações fundamentadas, essencialmente, em informações extraídas de documentos de patente.

A patente é uma importante fonte formal de informação, por meio da qual se pode ter acesso a detalhes técnicos de invenções que, em alguns casos, não estão descritos em outros meios de divulgação¹ (livros, artigos técnicos etc.).

O objetivo desta publicação, de periodicidade semestral, é o de alertar sobre os depositantes mais expressivos em determinado período, os países onde o primeiro depósito foi solicitado (país de prioridade), as áreas tecnológicas mais solicitadas, e de divulgar os títulos dos pedidos de patente publicados mundialmente em determinado período, permitindo, desta forma, a atualização periódica de seu público alvo.

Um pedido de patente é constituído de uma folha de rosto, do relatório descritivo da invenção, das reivindicações (quadro reivindicatório), dos desenhos (se necessário) e do resumo. A folha de rosto contém os dados bibliográficos do pedido de patente, tais como, os nomes dos depositantes e dos inventores, as datas e os números de depósito, de publicação e de prioridade do pedido, a classificação internacional, o título e o resumo da invenção, entre outros.

¹ Hong, Soonwoo. **The Magic of Patent Information**, Disponível em:
http://www.wipo.int/sme/en/documents/patent_information.htm#basics. Acesso em 10 de outubro de 2008.

Os dados bibliográficos e a cópia completa do pedido de patente podem ser obtidos nas seguintes bases de patente disponíveis, gratuitamente, na internet:

1. Base Brasileira de Pedidos de Patente²: <http://www.inpi.gov.br>
2. Base do Escritório Europeu de Patentes³ : <http://worldwide.espacenet.com>
3. Base do Escritório Americano de Patentes⁴ : <http://uspto.gov>

Caso haja interesse em se conhecer o(s) depósito(s) de patente no Brasil, correspondente(s) (família do pedido de patente⁵) aos pedidos de patente estrangeiros listados no Anexo I, sugere-se uma busca de família dos pedidos de interesse. Neste caso, o Centro de Documentação do INPI – CEDIN informará os procedimentos a serem seguidos. Abaixo, seguem endereço e formas de contatar o CEDIN.

Tel. (21) 3037 3101, Fax. (21) 3037 3354

e-mail: cedin@inpi.gov.br

As cópias integrais dos pedidos de patente de interesse também podem ser solicitadas por meio do endereço copdocpat@inpi.gov.br ou por correio postal ao endereço anteriormente mencionado

² Esta base contém somente pedidos de patente depositados e publicados no Brasil a partir de 1982.

³ Contém pedidos de patente depositados e publicados em mais de 70 países.

⁴ Contêm pedidos de patente depositados ou concedidos e publicados apenas nos Estados Unidos.

⁵ Uma família de patentes é a coleção de documentos de patente relacionados à mesma invenção ou a invenções correlacionadas, publicados em diferentes países. Cada documento de patente da família baseia-se, normalmente, nos dados do primeiro pedido depositado no país da prioridade. Existem diferentes estruturas de famílias de patente. Para este Alerta, o termo família de patente refere-se ao conceito de “família simples”, na qual todos os documentos de patente têm em comum o número e a data da prioridade unionista (WIPO, 2008).

1.2 - Pedidos de patentes sobre Energia Solar

Embora ainda não tenha sido inventado um sistema de produção de energia que seja totalmente limpo, diversas soluções para a crescente demanda energética mundial tem sido desenvolvidas visando minimizar os impactos negativos sobre o meio ambiente, dentre tais soluções destacam-se aquelas baseadas em fontes inesgotáveis de energia, tal como a energia solar.

Atualmente a produção de energia solar em grande escala ainda não apresenta custo competitivo se comparado aos sistemas tradicionais de geração de energia, tais como os baseados em combustíveis fósseis e a geração hidrelétrica, embora já existam em operação sistemas de aquecimento solares de baixo custo, usados para aquecimento de água em residências.

Deve-se considerar também que a produção de energia solar sofre a influência de condições climáticas adversas tais como: nebulosidade, chuva e neve, além de ser interrompida a noite. Tais características determinam a implantação de meios de armazenamento da energia produzida nos períodos favoráveis, aumentando os custos envolvidos na operação.

A despeito de tais fatores restritivos, o uso da energia solar apresenta muitas vantagens, podendo-se citar o fato de que a mesma tem por base uma fonte energética praticamente inesgotável.

Além disso, os processos de produção de energia solar tem baixo impacto sobre o meio ambiente, pois não emitem resíduos durante a conversão e os equipamentos utilizados tem baixo índice de manutenção, além disso podem ser instalados em localidades remotas, tal como o interior do Brasil, evitando elevados gastos com extensas linhas de transmissão.

Para ser utilizada, a energia solar inicialmente é capturada e depois é convertida para outras formas de potência, tais como calor e energia elétrica.

Os principais processos de aproveitamento da energia gerada pelo sol atualmente empregados são: o processo heliotérmico, também chamado de fototérmico ou termossolar, e o processo fotovoltaico.

No processo heliotérmico a energia solar é absorvida pelos corpos sob a forma de calor, os coletores solares, os quais aquecem fluidos (líquidos ou gasosos) que podem ser usados diretamente (como no caso da água quente) ou mantidos em reservatórios termicamente isolados. Tais fluidos aquecidos podem também gerar gases para o acionamento de turbinas.

Já no processo fotovoltaico, após a captura da luz solar, esta é diretamente convertida em energia elétrica pelo chamado efeito fotovoltaico, no qual uma diferença de potencial é gerada nos extremos de estruturas, a partir da absorção da luz por materiais semicondutores, sendo sua unidade fundamental a chamada célula fotovoltaica.

É de grande relevância notar que o território brasileiro possui latitude equatorial e está localizado, em sua maior parte, na região inter-tropical, com alto nível de incidência solar durante o ano. Outro fator extremamente positivo reside no fato de que possuímos grandes reservas de silício solar, matéria prima dos painéis de captação, constituindo importante vantagem estratégica a nível mundial.

Assim, objetivando fornecer informações importantes sobre o estado da técnica relacionado às tecnologias de aproveitamento da energia solar, como suporte aos interessados em desenvolver tecnologia endógena, o INPI, através da Coordenação de Estudos e Programas do CEDIN, publica este alerta tecnológico com os mais recentes desenvolvimentos nesse setor, os quais foram alvo de depósitos de patente em todo o mundo.

Para a realização deste trabalho, utilizou-se o banco de dados do Escritório Europeu de Patentes. O período selecionado para pesquisa compreendeu os pedidos de patente publicados entre 01/07/2012 a 31/12/2012. A metodologia para a coleta dos documentos levou em conta as áreas da Classificação Internacional de

Patentes - CIP, na qual foram selecionados os pedidos de patente que apresentem pelo menos uma das classificações internacionais⁶ a seguir:

- F24J2/00. Utilização de calor solar, por ex., coletores de calor solar
- F24J2/04. Coletores de calor solar com o fluido de trabalho conduzido através do coletor
- F24J2/05. Coletores de calor solar envolto por um fechamento transparente
- F24J2/10. Coletores de calor solar tendo refletores como elementos de concentração
- F24J2/24. Coletores de calor solar com o fluido de trabalho sendo conduzido através de condutos tubulares absorvedores de calor
- F24J2/30. Coletores de calor solar com meios para trocar de calor entre uma pluralidade de fluidos
- F24J2/38. Utilização de calor solar empregando meios de reboque
- F24J2/40. Sistemas de calor solar não incluídos em outro local
- F24J2/46. Partes componentes, detalhes ou acessórios de coletores de calor solar
- F24J2/48. Utilização de calor solar caracterizado pelo material absorvedor
- F24J2/50. Coletores de calor solar com coberturas transparentes
- F24J2/52. Disposições de montagem ou suporte
- F24J2/54. Coletores de calor solar especialmente adaptados para movimentos rotativos
- H01L31/042. Dispositivos semicondutores sensíveis à radiação infravermelha compreendendo um painel ou um conjunto de células fotovoltaicas.
- E04D13/18. Aspectos de cobertura de telhados relativos a dispositivos que coletam energia,

⁶ Um documento de patente pode conter uma ou mais classificações.

2. RESULTADOS

2.1 - Mundo

No Gráfico 1 são apresentados os países de prioridade⁷ - dos documentos recuperados no segundo semestre de 2012, bem como as ocorrências em cada país. A busca realizada no sistema resultou num total de 3483 documentos de patente publicados ao redor do mundo no período considerado. Um ponto importante a ser analisado diz respeito ao país da prioridade unionista do depósito, que é o país onde foi realizado o primeiro depósito. O depositante pode solicitar a prioridade de seu pedido de patente em um país diferente do de sua residência, o que não se verifica na maioria dos pedidos. Considera-se que alguns depositantes optam por não efetuar seus pedidos prioritários nos países onde residem, motivados, dentre diversos fatores, pela constatação de que outros países apresentam mercados mais atrativos.

Assim, a observação do número de prioridades nem sempre indica a origem da tecnologia contida nos documentos de patentes publicados, portanto, havendo necessidade, deve-se proceder a análises mais profundas para elaborar uma avaliação mais precisa do potencial de desenvolvimento tecnológico de cada país.

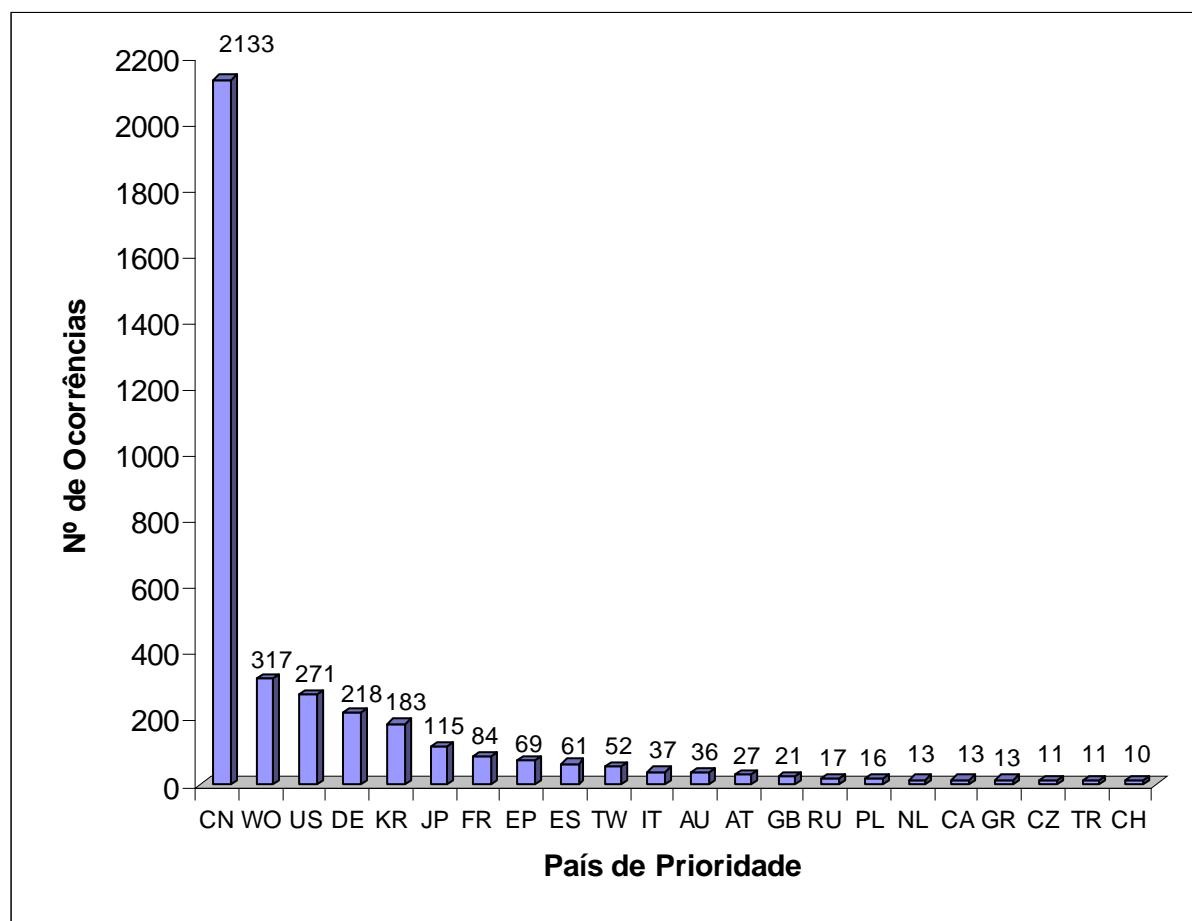

Mantendo a tendência dos demais alertas publicados sobre energia solar, e com base no Gráfico 1, pode-se verificar que o país com maior incidência de pedidos de prioridade publicados no período foi a China com 2133 documentos, representando 61,24% do total, e um crescimento de 11,38% em relação ao último levantamento, referente ao primeiro semestre de 2012. Em segundo lugar figuram os pedidos depositados através do Tratado de Cooperação em Matéria de Patentes (em inglês Patent Cooperation Treaty – PCT), que são efetuados na OMPI – Organização Mundial da Propriedade Intelectual, e inicialmente designados pela sigla WO, com um total de 317 documentos, representando 9,10% do total. Tal como verificado nos alertas tecnológicos anteriores relativos ao mesmo assunto, cabe ressaltar a grande diferença no número de depósitos entre os dois primeiros

⁷ Conforme estabelecido pela Convenção de Paris (CUT) em seu Art. 4º, o primeiro pedido de patente depositado em um dos países membros da Convenção serve de base para depósitos subsequentes relacionados à mesma matéria, efetuados pelo mesmo depositante ou por seus sucessores legais. Tem-se assim o **Direito de Prioridade**. O prazo para exercer tal direito é de 12 meses, para invenção e modelo de utilidade. Ver Art. 16, da Lei da Propriedade Industrial (LPI), nº 9.279/96 – disponível em www.inpi.gov.br.

colocados e os demais 44 países. A terceira posição no ranking de prioridades é ocupada pelos Estados Unidos com 271 pedidos publicados, equivalendo a 7,78% do total, a Alemanha com 218 pedidos prioritários detém o quarto lugar no ranking, equivalendo a 6,25% das ocorrências, a Coréia do Sul aparece na quinta posição do ranking com 183 pedidos, representando 5,25% do total de pedidos prioritários publicados no período, o Japão ocupa a sexta posição do ranking, totalizando 115 pedidos, que correspondem a 3,30% dos pedidos prioritários publicados no segundo semestre de 2012.

O Gráfico 1 a seguir apresenta os vinte países e as duas organizações internacionais com maior número de pedidos prioritários publicados no período. Cabe esclarecer, ainda, que os pedidos designados inicialmente pela sigla EP (European Patent) foram depositados no Escritório Europeu de Patentes (em inglês European Patent Office – EPO), figurando na oitava posição do ranking com 69 pedidos.

Grafico 1: Países de prioridade dos documentos recuperados em nível mundial x número de ocorrências.

Fonte: Elaboração própria a partir do banco de dados do Escritório Europeu de Patentes.

De acordo com o gráfico 1 as siglas dos principais países de prioridade são apresentados abaixo (vide relação completa no Anexo I).

CN – China

WO – WIPO (pedidos via PCT)

US – Estados Unidos da América

DE – Alemanha

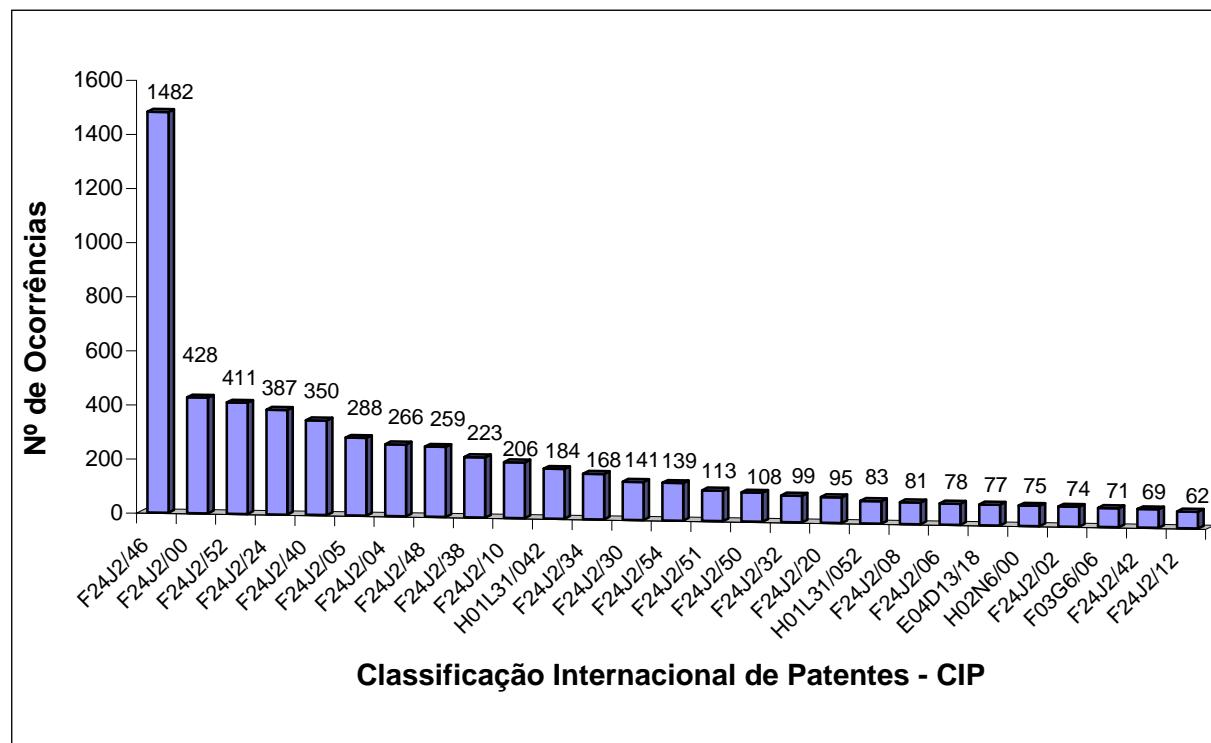

KR – Coréia do Sul

JP – Japão

No que concerne às áreas de concentração da tecnologia, tomando-se por base os itens da Classificação Internacional de Patentes – CIP, foram considerados apenas os grupos com 62 ou mais incidências nos quais estavam distribuídos os documentos encontrados. Dentre os vinte e sete principais grupos da CIP identificados nos documentos publicados, constata-se que a maior concentração de pedidos (24,63%) enquadra-se no subgrupo F24J2/46. Também destaca-se a concentração de documentos no grupo principal F24J2/00 que responde por 7,11% das ocorrências (a relação completa dos títulos dos subgrupos consta da página 8).

O gráfico 2, a seguir, permite visualizar como estão distribuídas as principais classificações das tecnologias relacionadas à energia solar, descritas nos pedidos de patente publicados no segundo semestre de 2012.

Grafico 2: Distribuição dos documentos pela Classificação Internacional de Patente

Fonte: Elaboração própria a partir do banco de dados do Escritório Europeu de Patentes.

No que diz respeito às áreas de concentração tecnológica dos pedidos, segundo a Classificação Internacional de Patentes, cabe ressaltar o considerável

aumento número de pedidos classificados em F24J2/05, que evoluíram da décima para a sexta posição no ranking atual.

No tocante aos principais depositantes de pedidos de energia solar, foram considerados apenas aqueles que contam com nove ou mais incidências, os quais estão relacionados na Tabela 1 apresentada abaixo.

Tabela 1: Relação dos principais depositantes dos países com pedidos de prioridade de patente e o número de pedidos publicados no 2º semestre de 2012

Depositante	Total de Documentos
ZHENJIANG NEW MENGXI ENERGY TECHNOLOGY CO LTD [CN]	30

Fonte: Elaboração própria a partir do banco de dados do Escritório Europeu de Patentes.

De acordo com os dados da Tabela 1, a exemplo do que ocorreu no alerta anteriormente publicados constata-se a manutenção do primeiro lugar pelos depositantes chineses, os quais ocupam quinze posições dentre os vinte e um principais depositantes, perfazendo o total de 282 pedidos publicados. Os depositantes alemãs ocupam a segunda posição contando com dois depositantes que totalizam 40 pedidos. Constam ainda da tabela dois depositantes japoneses, dois franceses, e um único representante de origem espanhola, cada um destes

contabilizando por nacionalidade dos depositantes, 17 pedidos publicados no período.

2.2 - Brasil

No tocante aos pedidos de patente brasileiros, com base nos dados constantes da Tabela 2, foram identificados seis documentos depositados no país, sendo dois com prioridade nacional. Dentre os quatro pedidos com prioridade estrangeira publicados no Brasil constam dois pedidos com prioridade americana, um com prioridade francesa e outro com prioridade taiwanesa. Dentre os quarenta e seis países com depósitos prioritários publicados, o Brasil ocupa trigésima sétima posição no ranking de prioridades, caindo doze posições em relação ao alerta anterior.

O perfil dos depositantes brasileiros revela que os dois pedidos prioritários encontrados, foram efetuados por inventores independentes. Não foi detectado nenhum pedido com prioridade brasileira que tenha sido efetuado no exterior e publicado no segundo semestre de 2012.

Tabela 2: Dados bibliográficos dos Pedidos de Patente sobre Energia Solar publicados no segundo semestre de 2012

(Ordenados segundo o código do país de publicação)

Obs:

1- Os depósitos efetuados pelo sistema PCT – Patent Cooperation Treaty, representados pela sigla WO – Wipo Organization, contam com 178 ocorrências e correspondem a pedidos de prioridade de diversas nacionalidades, já que o sistema PCT atualmente é adotado por 142 países.

¹ A OAPI é um organismo intergovernamental encarregado de emitir títulos de proteção dos direitos de propriedade industrial e de prestar serviços relacionados com a propriedade industrial para cada um dos Estados-membros. Aplica uma legislação uniforme que tem lugar de lei nacional para cada um dos Estados-Membros: o Acordo de Bangui. Estes títulos de proteção têm efeito automático em cada um dos seguintes Estados-membros: Benim, Burquina Faso, Camarões, África Central, Congo, Costa do Marfim, Gabão, Guiné, Guiné Bissau, Guiné Equatorial, Mali, Mauritânia, Nigéria, Senegal, Chade e Togo.

² O código “WO” é utilizado para a publicação internacional dos pedidos depositados via Tratado de Cooperação em Matéria de Patentes (PCT) em qualquer um dos países receptores destes pedidos.
